Hello Dear manager,

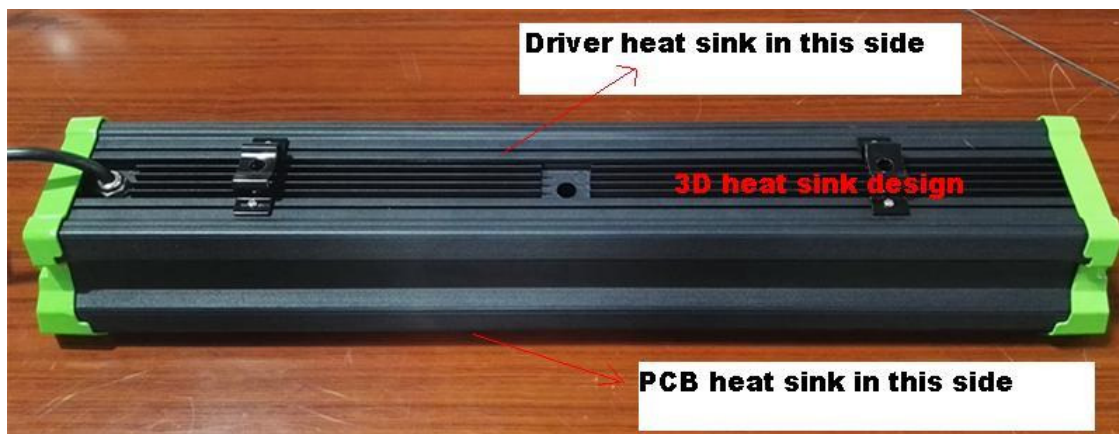

Good day.

Today , Amy glad to introduce private tooling model"Linear highbay light",it is very popular, Philips SMD 3030+120lm/w+Meanwell driver+TUV-GS,CB,CE, CE,ROHS, SAA, VEET etc.

Comparing with market mould, BREE have below design advantages:

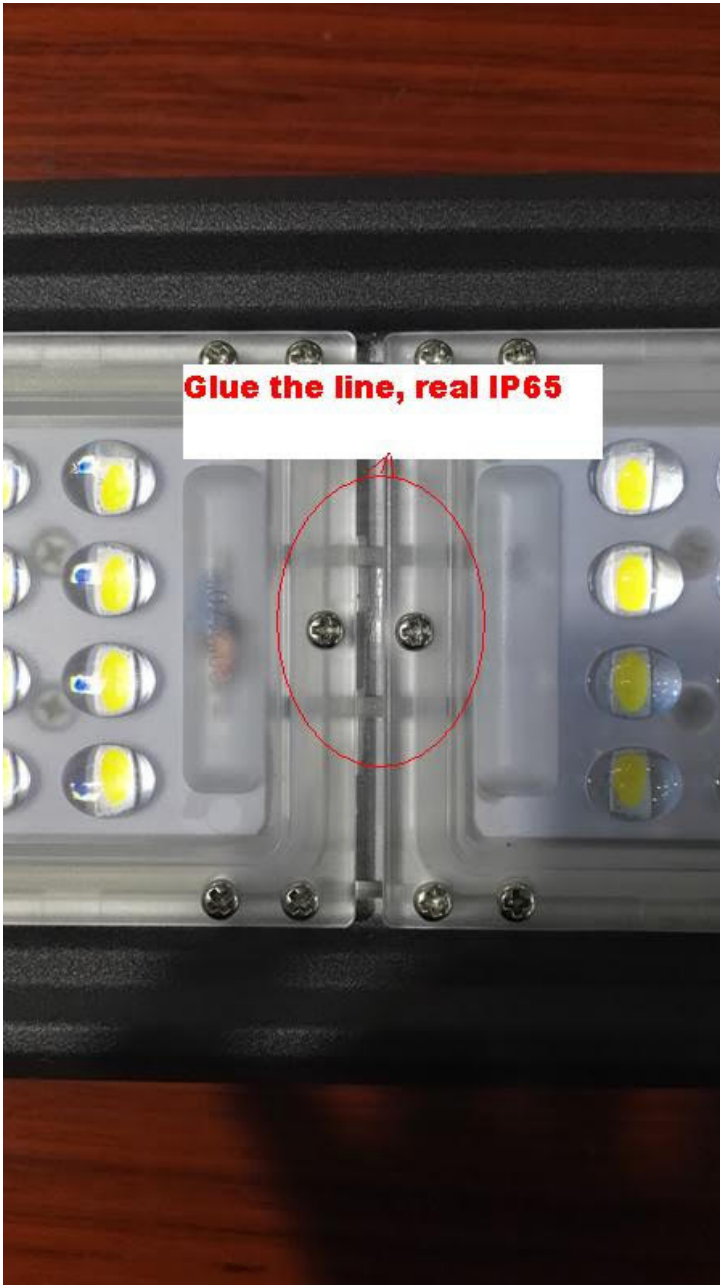

1. Driver and PCB are fixed in the different side of housing to dissipate heat, very good heat-sink
market fixed the driver and PCB in the same side

2. Many holes design is also for good heat-dissipation, inside heat of the housing can flow easily to outside.

3. Glue the wire directly during the production of connecting the two moulds, real IP65 waterproof

4. BREE is 50w per mould design, 100w only use 2moulds and have 1 dead zone.
Market mould is 30w per mould, if 3pcs can only 90w, but have 2 dead zone, waste more light

5. BREE also can do the end housing in Black / Red / Yellow / Blue / Green etc.

Any interest or more files need, just let me know.

Have a nice day,

Thanks&Regards,

Amy
