Hi dear friend,

Good day!

Very glad to share our new Generation LED floodlight, we called it: Venus II 01 VK led floodlight.

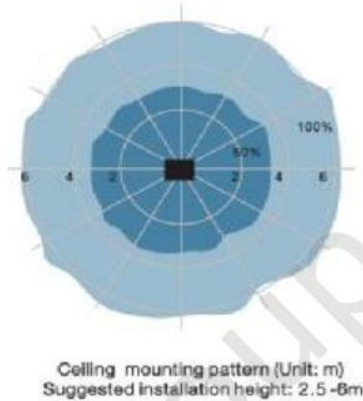

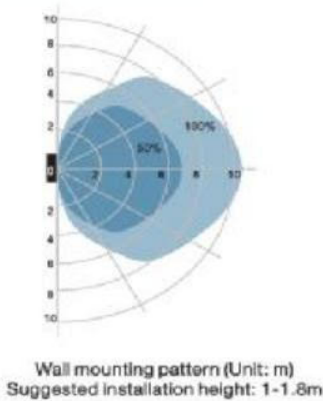

100lum/w, Epistar Chip + SMD2835 + Frosted Glass Optional+IP65 waterproof+ Microwave Sensor(5.8 G remote control ) available!

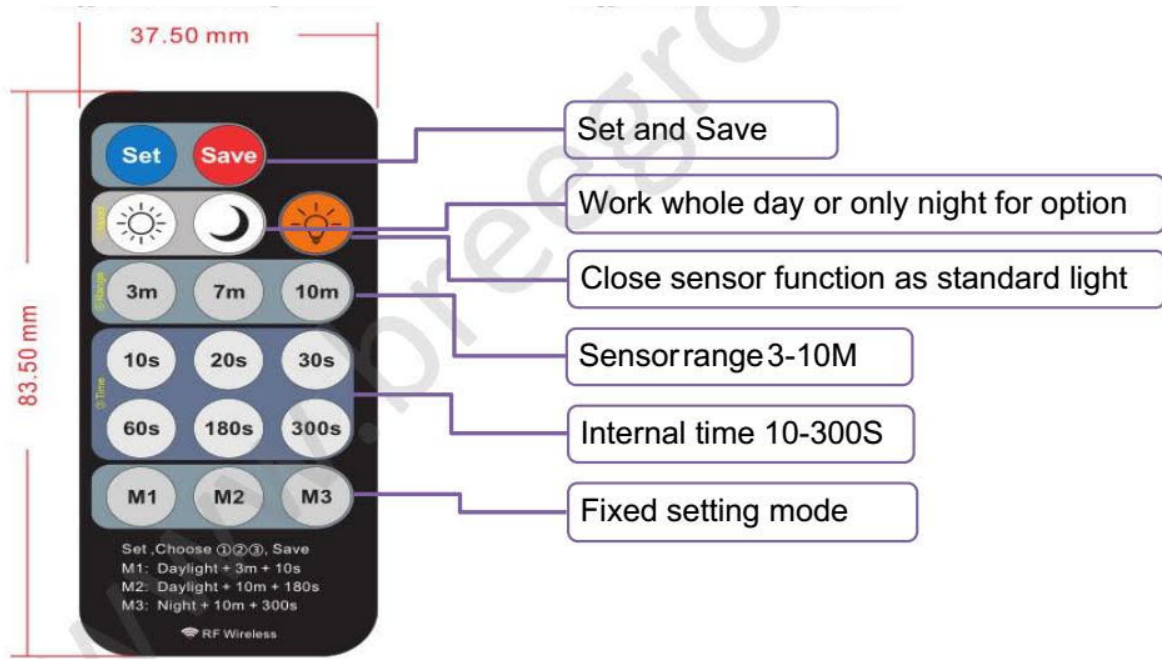

For the Microwave function, new internal microwave sensor is inside the lamp, the sensor will switch on the lamp when motion is detected. After hold time, the sensor will switch off the lamp if no motion is detected within it's detective zone, see the below Instructions:

**Detection Pattern**

If interested, welcome to ask me the price and datasheet !

Have a nice day!

Best regards

Maggie Chen
